## Thoracic-Lumbar Cage II

990100014

### Optimal Condition for Fusion

- PEEK-OPTIMA® material is biocompatible and much closer to that of spongy bone, consequently minimizing the risk of systemic uptake and local inflammatory reactions.
- Perforated structure for bone ingrowth and throughgrowth.
- Roughened surface promotes integration and bone ongrowth.

Thoracic-lumbar Cage II is available in PEEK or Titanium materials.

### Maximized Contact Area

Providing maximum space for bone graft and vascularization with optimal load bearing surface area.

### Instrument

- Precisely machined instrument slot ensures secure fit between implant and implant holder.
- Instrumentation for Thoracic-lumbar Cage II is identical to type I, reducing the stock.

### Specially Aligned Teeth

Teeth on superior and inferior surfaces ensure good primary stability and reduce the risk of cage migration.

### X-ray Marker

Allowing 3D visualization and radiological control of graft density.

### Bevelled Leading End

Facilitates insertion and spares the endplates without any drilling or cutting required.

### Axial Window

Accommodates autogenous bone graft or bone graft substitute to allow fusion to occur through the cage.

### Indications

- Narrow lumbar spinal canal
- Pseudarthrosis or failed arthrodesis
- Degenerative disc disease and spinal instability
- Degenerative spondylolisthesis
- Spondylolisthesis with stenosis
